## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Eucalyptus Oil for Daily Chemical competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Eucalyptus oil is widely used in the daily chemical industry as a versatile, natural ingredient in the formulation of a broad range of personal care and household products. Its efficacy stems from its primary active compound, 1,8-cineole (eucalyptol), which provides antimicrobial, anti-inflammatory, and deodorizing properties, along with a characteristic fresh, clean scent. In 2024, global Eucalyptus Oil for Daily Chemical with Mirror production reached approximately 22 K MT, with an average global market price of around US\$ 12996 per MT. The eucalyptus oil for daily chemical market is a focused subsegment of the broader essential oils and fragrance-ingredients industry, supplying cineole-rich oils and tailored fractions used in household cleaning products, laundry detergents, dishwashing liquids, air fresheners, surface disinfectants, oral care, and some personal-hygiene items. Daily-chemical grade eucalyptus oil emphasizes consistent odor profile, solubility, stability in surfactant systems, and competitive cost, and is often blended or fractionated to fit specific fragrance briefs and functional needs (freshness, ?clean? perception, hygiene cues). The industry chain runs from eucalyptus cultivation and leaf harvesting, through steam distillation and fractionation by oil processors, to fragrance houses and daily-chemical manufacturers that incorporate eucalyptus oil or its blends into finished detergents, cleaners, and hygiene products sold via retail and institutional channels worldwide. The main driving factors are the strong consumer association of eucalyptus with cleanliness, freshness, and respiratory comfort, which makes it a popular note in multipurpose cleaners, bathroom products, laundry fragrances, and disinfectant lines?especially where brands want a ?natural? or plant-derived positioning. Growth in hygiene

awareness (exacerbated by pandemics and urban living), expanding use of fragranced household and fabric-care products in emerging markets, and the premiumization of daily chemicals (e.g., ?natural,? ?herbal,? or aromatherapy-inspired variants) support demand, as does the shift in some segments away from purely synthetic fragrance components toward partial or full natural profiles. At the same time, the market faces headwinds from competition with cheaper synthetic aroma chemicals that can mimic eucalyptus notes, variability in oil supply and quality due to climate and agricultural factors, and tightening regulatory and IFRA constraints on fragrance compositions that may limit certain uses or require reformulation. Balancing its strong branding value and multifunctional role against these cost, supply, and regulatory pressures, suppliers of eucalyptus oil for daily chemical applications typically achieve moderate gross profit margins, most commonly in the range of about 20?35%, with margins nearer the top of that range for high-quality, certified or custom-tailored fractions and nearer the bottom for bulk, commodity-grade oils used in price-sensitive mass-market cleaners.

The global Eucalyptus Oil for Daily Chemical market size was estimated at USD 286.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
