Report Overview

Electric vehicle (EV) battery coolers are thermal management systems designed to regulate the temperature of lithium-ion batteries in electric vehicles, ensuring optimal performance, safety, and longevity. These systems prevent overheating during fast charging or high-load conditions while also maintaining efficiency in cold climates by preheating the battery when necessary. EV battery coolers typically use liquid or air cooling methods, with liquid cooling being more efficient for high-performance and long-range applications. The technology plays a critical role in battery health, as excessive heat can degrade battery life, reduce energy storage capacity, and increase safety risks such as thermal runaway. With the rapid growth of the EV market, advancements in battery cooling systems are becoming increasingly important to support faster charging, higher energy densities, and improved thermal stability. The industry is also exploring innovative materials like phase-change materials (PCMs) and refrigerant-based cooling for next-generation solutions.

The global Ev Battery Coolers market size was estimated at USD 16267.88 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 25.50% during the forecast period.
