Abstracts

The Battery Disconnect Unit (BDU) is an important component in electric vehicles (EV) and hybrid electric vehicles (PHEV). Its main function is to safely disconnect the battery from the electric system to prevent electrical problems or safety hazards in certain situations. BDU plays a vital role in the automotive battery management system to ensure the safe operation of the vehicle. The global key manufacturers of EV Battery Disconnect Unit (BDU) include Panasonic, BYD, Lear Corporation, WuHan Jason Automotive Technology, Aptiv, Guangdong Senssun Weighing Apparatus Group, Chilye Green Technology, EFI Automotive, and Ningbo Fengmei, etc. In 2024, the global top five players had a share approximately 49.84 % in terms of revenue. As the price war in the automotive industry intensifies, cost reduction has become one of the main concerns of vehicle manufacturers. Through the modularization and integration of components, the safety and reliability of the entire module can be improved while effectively reducing the production process and production costs of individual components and reducing other materials, thereby reducing costs and increasing efficiency. Therefore, integration and modularization have become the main direction of industry development, and application scenarios are constantly increasing and penetrating.
