Abstracts

Ethylene vinyl acetate (EVA) is formed by the copolymerization of ethylene and vinyl acetate. It has excellent toughness property. When EVA is forged into a porous material, it acts similar to rubber due to its elastic property. EVA when compared with low-density polyethylene (LDPE) is three times more flexible. This material has various properties, such as low-temperature toughness, stress-crack resistance, ultraviolet radiation resistance, good barrier properties, and hot-melt adhesive waterproof properties. In terms of geographic regions, APAC will be the major revenue contributor to the EVA market throughout the forecast period. China is the largest consumer of EVA in APAC. The rise in demand for flexible packaging and the growth of the footwear industry in China, is driving the demand for EVA market in the region.

The global EVA market size was estimated at USD 6648.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.00% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global EVA market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
