Abstracts

As the name suggests, this equipment is used to cut EVA / TPT. In the production line of solar cells, this equipment can greatly reduce labor costs. In addition to photovoltaic webbing, it can also cut materials such as silicone hose, rubber hose, plastic hose, nylon pipe, PE pipe and so on. The EVA and TPT Cutting Table market caters to the solar panel manufacturing industry, providing specialized equipment designed for precision cutting of ethylene-vinyl acetate (EVA) and tedlar-polyester-tedlar (TPT) sheets. EVA and TPT are critical components in solar panel encapsulation, where EVA serves as a protective and adhesive layer while TPT acts as a backsheet to shield the panels from environmental factors. These cutting tables offer manufacturers the ability to accurately size and shape these materials, ensuring they fit precisely with the solar cells and other components. As the demand for solar panels and renewable energy solutions continues to rise, the EVA and TPT Cutting Table market plays a crucial role in streamlining production processes, reducing waste, and enhancing the overall quality and durability of solar panels. This market is instrumental in supporting the renewable energy sector's growth, enabling more efficient and cost-effective solar panel production, and ultimately contributing to a sustainable and environmentally conscious future.

The global EVA and TPT Cutting Table market size was estimated at USD 286.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
