Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on EVCC Chips competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global EVCC Chips production reached approximately 15,246.7K Units, with an average global market price of around 9.7 USD per Unit. An Electric Vehicle Communication Controller (EVCC) chip is an integrated circuit (IC) designed to handle the communication and control protocols between an electric vehicle (EV) and the electric vehicle supply equipment (EVSE/charging station) during charging. Upstream raw materials for EVCC chips primarily include wafers, photoresists, electronic chemicals, sputtering targets, and packaging materials. Typical suppliers include Shin-Etsu Chemical, SUMCO, JSR, and Tokyo Ohka TOK. Downstream customers primarily include EVCC controller manufacturers, such as Sensata Technologies, Phoenix Contact, and Delta Electronics. The single-line production capacity of EVCC chips is generally related to the chip manufacturing process and production line scale, and specific figures may vary by manufacturer. The gross profit margin of EVCC chips is influenced by manufacturing costs, market demand, and the competitive landscape. The industry average gross profit margin is generally between 35% and 50%. With the rapid growth of the new energy vehicle market, demand for EVCC chips is increasing, and gross profit margins are expected to rise further.

The global EVCC Chips market size was estimated at USD 148.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
