Abstracts

Excavators are heavy Construction Machinery consisting of a boom, dipper (or stick), bucket and cab on a rotating platform known as the 'house'. The house sits atop an undercarriage with tracks or wheels. They are a natural progression from the steam shovels and often mistakenly called power shovels. All movement and functions of a hydraulic excavator are accomplished through the use of hydraulic fluid, with hydraulic cylinders and hydraulic motors. Due to the linear actuation of hydraulic cylinders, their mode of operation is fundamentally different from cable-operated excavators which use winches and steel ropes to accomplish the movements.

The global Excavator market size was estimated at USD 65320.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.04% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Excavator market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
