The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Excimer Irradiation Unit competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Excimer irradiation unit is a device that uses excimer light, which generates ultraviolet light of a specific wavelength, to irradiate the surface or interior of a material. This equipment is used for material processing and surface modification. Excimer irradiation is used for fine pattern formation, thin film peeling, surface cleaning, etc., and plays an important role in a wide range of fields, including semiconductor manufacturing, medical equipment manufacturing, scientific research, and optical photonic device manufacturing. Excimer irradiation technology, leveraging the unique properties of excimer lasers, has become increasingly significant across various industries due to its precision and versatility. This report focuses on the applications of excimer irradiation in the semiconductor industry, flat panel display (FPD) manufacturing, furniture and decoration, and the medical industry. Excimer irradiation unit is used in a variety of industries, and demand is steadily expanding. Demand is particularly increasing in fields such as semiconductor manufacturing, printing, and scientific research. In addition, the high-precision and high-speed processing capabilities of excimer irradiation units are also important in the precision processing industry. Excimer irradiation equipment is undergoing technological innovation in light sources and materials, which is improving product performance. For example, the development of high-power and high-efficiency excimer lamps and the use of new excimer gases are underway. This is expanding the range of applications for excimer irradiation equipment and creating new markets. There is a trend towards developing smaller, more portable excimer irradiation units, making them more accessible and convenient for use in various settings. Emerging markets in Asia-Pacific, Latin America,

and Africa are experiencing rapid development in healthcare infrastructure. Increased healthcare spending and government initiatives to improve medical services are driving the demand for advanced medical equipment. The rising demand for consumer electronics, automotive electronics, and advanced computing devices is driving the growth of the semiconductor industry. Excimer lasers are essential for producing the complex and miniaturized circuits required in these devices. Excimer irradiation unit enables fine pattern formation and surface modification, and when combined with precise processing technology, it realizes high-quality products. For this reason, excimer irradiation unit is widely used in industry.

The global Excimer Irradiation Unit market size was estimated at USD 65.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
