Report Overview:

Excimer Laser Treatment System mainly covers Ambulatory Surgical Centers and Medical Beauty.

Excimer lasers aim a high intensity ultraviolet B (UVB) light dose of a very specific wavelength -- 308 nanometers -- directly at the psoriasis plaques. Because the laser light never touches the surrounding skin, it reduces the risk of UV radiation exposure. Excimer lasers are used to treat mild-to-moderate psoriasis.

Excimer laser photorefractive keratectomy and excimer laser in situ keratomileusis are relatively new treatment modalities that can be used to correct refractive errors of the eye. They are most commonly used to correct myopia (nearsightedness) but can also be used to correct hyperopia (farsightedness) and astigmatism.

The Global Excimer Laser Treatment System Market Size was estimated at USD 501.72 million in 2023 and is projected to reach USD 703.67 million by 2029, exhibiting a CAGR of 5.80% during the forecast period.
