Abstracts

Exosome CDMO refers to providing customized R&D and manufacturing services for biopharmaceutical companies across the entire exosome chain, from process development to large-scale production. Its core businesses encompass the construction and culture of exosome production cell lines, development of large-scale exosome extraction and purification processes, rigorous quality control and analysis (including purity, drug loading, and biological function), formulation development, and GMP-compliant manufacturing. This service aims to help clients address the technical, process scale-up, and compliance challenges they face in developing exosomes as drug carriers or therapeutic products, accelerating the translation from laboratory research to preclinical and clinical trials. It is an indispensable key support platform for the industrialization of exosome therapies. The global Exosome CDMO market exhibits a distinct pattern of "technology leadership, regional concentration, and the rise of the Asia-Pacific region." North America (especially the United States) currently holds an absolute leading position, possessing the most mature GMP production system, the most cutting-edge engineering technology platform, and a dense customer base of early-stage biotechnology companies, dominating the global early-stage clinical trial supply chain. Europe, with its strong foundation in cell and gene therapy, boasts robust capabilities in process development and quality systems. The Asia-Pacific region (represented by China and South Korea) is the fastest-growing market globally. Leveraging its mature biopharmaceutical manufacturing ecosystem, relatively flexible service models, and rapid technological advancements, it is actively building a service system from process development to localized production, aiming to become a key node in the regional and even global supply chain. The industry as a whole is still in its early stages, rapidly evolving from fragmented research services to a standardized, large-scale pharmaceutical-grade industry.

The global Exosome CDMO market size was estimated at USD 593.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.
