The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Exosome Protein Extraction Kit competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Exosome Protein Extraction Kit is a premixed reagent combination designed for the efficient extraction and purification of total protein from exosomes. Typically based on lysis, denaturation, or precipitation, combined with centrifugation or column separation techniques, it rapidly disrupts the exosome membrane structure and releases the proteins contained within, while simultaneously removing impurities such as nucleic acids and lipids. The kit is simple to use and boasts high extraction efficiency, making it suitable for downstream applications such as Western blot, ELISA, and mass spectrometry. It is widely used in life science research fields, including exosome functional research, biomarker screening, and disease diagnosis. In 2024, the global production of exosome protein extraction kits will reach 95,780 units, with an average selling price of US\$716 per unit.

The global Exosome Protein Extraction Kit market size was estimated at USD 68.59 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
