## Abstracts

Expandable graphite is a synthesized intercalation compound of graphite that expands or exfoliates when heated. This material is manufactured by treating flake graphite with various intercalation reagents that migrate between the graphene layers in a graphite crystal and remain as stable species. Increasing adoption of expandable graphite as a flame retardant in the construction industry, increasing demand for halogen-free flame retardants, and growing consumer electronics market are expected to increase the global expandable graphite consumption. Furthermore, growing product adoption in applications such as batteries, coatings, plastic films, rubber products, heating and cooling systems, energy storage systems, and sealing systems is another significant factor expected to drive the global market over the forecast period. Increasing ban on hazardous refractories such as brominated or asbestos refractories in buildings and gaskets is expected to provide new opportunities for the expanding graphite market. Some countries have banned the production of these hazardous refractory materials due to their adverse effects on the environment, human health and life. These bans are expected to provide significant opportunities for non-toxic and highly refractory expanded graphite in the future. They are likely to create lucrative opportunities over the forecast period. Flame retardant application dominates the market due to increasing use of flame retardants in industries such as construction, electrical & electronics, etc. These industries are increasingly using flame retardant materials to meet prevention and fire safety regulations. Furthermore, stringent regulations on building codes for the use of flame retardants will boost the market growth. Rising awareness has spurred consumer demand for flame retardants to enhance the fire safety of combustible products and materials. Flame retardants in homes and offices reduce fire risks in electrical and consumer products. All the aforementioned factors are expected to drive the global market over the forecast period.

The global Expandable Graphite Sheets market size was estimated at USD 199.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.70% during the forecast period.
