Abstracts

Expanded glass microspheres are lightweight, hollow microspheres manufactured from recycled glass, characterized by their low density, high compressive strength, and thermal and acoustic insulation properties. These inert, spherical particles are primarily used as functional fillers and additives across various industries, including construction (for lightweight concrete, mortars, and plasters), automotive and aerospace (for composites and syntactic foams), oil and gas (for cementing and drilling fluids), and coatings (to improve texture and reduce density). The market is driven by increasing demand for sustainable, energy-efficient materials and lightweight solutions, with growth influenced by advancements in manufacturing technologies, regulatory emphasis on recycling and green building standards, and expansion in end-use sectors requiring high-performance, eco-friendly materials.

The global Expanded Glass Microspheres market size was estimated at USD 125.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
