Abstracts

The expansion power generation equipment is a volumetric expander. The commonly called screw expander refers to the twin-screw expander, which is specially developed and optimized for the expansion of gas. It is mainly composed of a pair of intermeshing screw rotors and a casing. The rotors and the rotors, and between the rotors and the casing are sealed with a gap to form a working cavity with a continuously variable volume. The gaseous working medium containing heat enters the working cavity for adiabatic expansion, driving The rotor rotates to do work, and while the expansion does the work, the pressure and temperature of the working medium are reduced, so as to realize the conversion of heat and power. The intake air of the screw expander can be saturated steam or even steam with liquid; the relative motion between the screws can limit the scaling, and the scaling can also reduce the gap and improve the efficiency; the screw expander has a wide range of variable working conditions, even in Lower loads still have high isentropic efficiency. Screw expansion generator sets are widely used in iron and steel industry waste heat power generation, industrial waste pressure power generation, geothermal power generation and biomass power generation.

The global Expansion Power Generation Equipment market size was estimated at USD 12540.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
