Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Explosion Bonding Metal Composites competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Explosion bonding is also known as explosive cladding, explosion welding. It is the bonding of two or more dissimilar metals with the aid of explosives. It is accomplished by a high-velocity oblique impact between two metals. The impact produces sufficient energy to cause the colliding metal surfaces to flow hydro dynamically when they intimately contact one another in order to promote solid-state bonding. The metal surfaces are compressed together under high pressure from the explosion, and an atomistic bonding between the dissimilar metals will be accomplished. With rising demand for corrosion-resistant, high-strength, and lightweight materials, the market for explosion-bonded composites continues to grow. This technology is especially critical for combining metals like titanium/steel, stainless steel/carbon steel, and copper/aluminum, where traditional welding or rolling methods are not feasible. China has emerged as a major producer, with increasing domestic innovation and capacity. Looking forward, driven by the expansion of clean energy, advanced chemicals, and marine engineering, the industry is expected to move toward larger formats, multi-layer structures, higher precision control, and smart manufacturing. Explosion bonding will remain an indispensable technology in high-end applications, offering strong future growth prospects globally. In the Explosion Bonding Metal Composites market, North American companies take the lead in aerospace, high-end electronics and other fields; European companies have deep technical accumulation in automobile manufacturing, energy equipment and other industries. Due to the rapid development of emerging economies, the Asia-Pacific region has become the fastest growing region in the metal explosion composites market, and the increase in market

demand has also driven the gradual improvement of technology.

The global Explosion Bonding Metal Composites market size was estimated at USD 1111.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
