Report Overview

Explosion diverters provide a cost effective means of mitigating the propagation of an explosion through ductwork. The relief vents are fitted into connecting pipes to separate subsequent apparatus in the event of a hazard. If an explosion happens in the equipment, the flat closes immediately, and disconnects the area concerned from the other apparatus. Transmission of the explosive pressure is interrupted, and the propagation of sparks therefore largely avoided. With the pressure relief vent you therefore protect your pipelines effectively from explosion transfer.
