Abstracts

An explosion proof blanket, also known as a fire containment blanket or emergency suppression blanket, is a safety device designed to smother and extinguish small fires, particularly those involving flammable liquids, electrical equipment, or cooking oils, by cutting off the oxygen supply necessary for combustion. These blankets are typically constructed from fire-resistant materials such as fiberglass, wool treated with flame-retardant chemicals, or specialized composite fabrics that can withstand high temperatures without degrading. They are engineered to be non-conductive, chemically inert, and durable enough to handle rapid deployment in hazardous environments, including industrial settings, laboratories, kitchens, and workshops, where traditional extinguishing methods might be ineffective or risky. The design often includes reinforced edges and quick-release storage containers to facilitate immediate use during emergencies, aligning with occupational safety standards and regulations aimed at mitigating fire-related accidents in high-risk areas.

The global Explosion Proof Blanket market size was estimated at USD 120.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
