Abstracts

Explosion-proof collaborative robot products have multiple explosion-proof designs and can be used in dangerous and explosive working environments to replace people working in dangerous and explosive working environments. In the fields of petrochemicals, coal mining, natural gas storage and transportation, flammable and explosive, high temperature and high pressure and other dangerous environments are common, and traditional manual inspections and operations face extremely high risks. Explosion-proof collaborative robots significantly reduce the probability of safety accidents by replacing manual entry into high-risk environments to perform tasks such as equipment monitoring, gas leak detection, and dangerous goods handling. For example, in oil refineries, robots can monitor equipment status in real time to reduce the risk of explosions. Governments of various countries have strengthened industrial safety supervision. For example, China's strict regulations on the hazardous chemicals industry require companies to use advanced technologies to ensure production safety. Explosion-proof robots have become an important tool for corporate compliance because they meet policy requirements. The improvement of international safety standards (such as ISO 10218-1) has improved the safety performance of collaborative robots, and the accident rate is significantly lower than that of traditional industrial robots, which has enhanced market trust.

The global Explosion-proof Collaborative Robot market size was estimated at USD 101.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.70% during the forecast period.
