Abstracts

Explosion-proof conduit joint is an important component used to connect explosion-proof conduit systems, usually used to transmit electrical lines or signal lines in explosive environments. These joints are designed to be tightly sealed to prevent flammable gases or vapors from entering the interior of the duct system, thereby reducing the risk of explosion. Explosion-proof conduit joints usually have waterproof, dustproof, anti-corrosion, fireproof, high-temperature resistance and other properties to ensure safe operation in hazardous environments. They usually comply with relevant explosion protection standards and specifications, such as ATEX, IECEx, etc., to ensure that they meet safety requirements. Explosion-proof conduit joints can be used in various situations, such as petrochemical plants, chemical plants, oil fields, mines, ships, refineries and other environments that require explosion-proof protection.
