## Abstracts

Explosion proof convectors are specialized heating devices engineered to operate safely in hazardous environments where flammable gases, vapors, or combustible dusts may be present, preventing ignition through robust construction methods such as sealed housings, temperature-limiting controls, and non-sparking materials. These units function by drawing in ambient air, heating it via electric or steam-based elements, and distributing the warmed air via natural or forced convection, all while maintaining integrity under potentially explosive conditions through certifications like ATEX, IECEx, or UL standards that validate their suitability for use in industries such as oil and gas, chemical processing, mining, and pharmaceuticals.

The global Explosion Proof Convector market size was estimated at USD 340.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
