Abstracts

Explosion proof LED strip lights are efficient lighting devices designed specifically for hazardous environments, widely used in industries such as petroleum, chemical, mining, and power, especially in flammable and explosive environments, to ensure safe and stable lighting. Explosion proof LED strip lights are designed according to different explosion-proof levels (such as Ex d, Ex e, etc.), which can effectively prevent internal electrical components of the lamp from malfunctioning and generating sparks or high temperatures, avoiding explosions. Using LED as a light source has the advantages of low energy consumption, high brightness, and long lifespan. LED light sources are more energy-efficient than traditional light sources such as fluorescent lamps, incandescent lamps, etc., and do not generate a large amount of heat, making them suitable for long-term operation in high-temperature environments.

The global Explosion Proof LED Strip Lights market size was estimated at USD 391.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
