Abstracts

An exposure meter, also known as a light meter, is a device used in photography to measure the amount of light in a scene. It helps photographers determine the correct exposure settings for their camera, such as aperture, shutter speed, and ISO, to achieve a properly exposed photograph. Exposure meters can be built into cameras or used as separate handheld devices. They typically measure the intensity of light in a specific area of the scene and provide readings in terms of exposure values (EV) or f-stops. This information helps photographers make adjustments to their camera settings to achieve the desired exposure.
