Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Exterior Slotted Track competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of Exterior Slotted Track (EST) were expected to reach approximately 25 million units, with an average selling price of \$22 per unit. This type of track is a U- or C-shaped cold-formed steel rail used in lightweight steel exterior wall systems. Continuous or discontinuous slots are located on the sidewalls or bottom of the track, allowing vertical studs or other connectors to float freely under the influence of temperature fluctuations, structural settlement, and wind loads. This type of track is widely used in curtain wall systems, the exterior walls of lightweight steel villas, and the non-load-bearing exterior wall frames of high-rise steel buildings, providing both structural guidance and deformation absorption. EEST is typically formed from galvanized steel strip (e.g., G40?G90) through a cold-bending process. Slot specifications are customized to compensate for thermal expansion and contraction, allowing installation with columns and insulation infill systems at varying spacings. It is a key component for ensuring the safety, flexible connection, and crack resistance of exterior wall systems.

The global Exterior Slotted Track market size was estimated at USD 590.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
