Abstracts

An external camera screen refers to an auxiliary display device that can be connected to a camera—typically a DSLR, mirrorless, or cinema camera—to provide a larger, higher-resolution, or more flexible viewing surface than the built-in screen. It is used primarily to improve framing, focus accuracy, and overall monitoring during photography or videography, especially in situations where the camera's native screen is too small, poorly positioned, or lacks critical features such as focus peaking, false color, or waveform monitoring. These screens vary in size, connectivity (HDMI, SDI, or wireless), and functionality, ranging from basic monitors to advanced units with touch controls, built-in LUT support, and sunlight visibility enhancements, catering to both amateur creators and professional cinematographers who require precise visual feedback.

The global External Camera Screen market size was estimated at USD 220.8 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
