Abstracts

External condom catheters are external urinary collection devices designed for male patients with urinary incontinence, consisting of a soft, flexible sheath that fits securely over the penis and connects to a drainage bag, offering a non-invasive alternative to indwelling catheters by reducing the risk of urinary tract infections and improving patient comfort and mobility. The market for these devices is primarily driven by the growing aging population, rising prevalence of conditions such as benign prostatic hyperplasia and neurological disorders, and increasing awareness of catheter-associated urinary tract infections, alongside advancements in material technology enhancing skin compatibility and adhesive properties. Geographically, North America and Europe dominate due to well-established healthcare infrastructure and higher adoption rates, while emerging economies in Asia-Pacific are witnessing rapid growth fueled by improving healthcare access and rising disposable incomes. Key players focus on innovation in silicone and latex-free materials, ergonomic designs, and strategic partnerships with healthcare providers, though the market faces challenges such as product misuse leading to complications, price sensitivity in developing regions, and competition from alternative incontinence management products.

The global External Condom Catheters market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
