## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on External High Power CW Light Source competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An external high-power CW light source refers to a light source device that is independent of the silicon photonic chip and provides a stable continuous wave laser output for the silicon photonic module. It usually uses a DFB laser chip as the core component and must meet performance indicators such as high power (starting from 70mW), high coupling efficiency (>80%), and wide operating temperature (-40~85?). The external high-power CW light source is the main laser solution currently used in silicon photonic modules. It can not only reduce the cost of lasers, but also reduce the failure rate of optical modules. External high-power CW light sources can be used not only in silicon photonic modules, but also in products such as CPO and optical interconnects. Many domestic optical chip companies are actively deploying and have launched CW light source products of various powers.

The global External High Power CW Light Source market size was estimated at USD 68.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.40% during the forecast period.
