Abstracts

External wall panel systems, also known as cladding or facade systems, are non-load-bearing assemblies installed on building exteriors to provide weather protection, thermal insulation, sound attenuation, and aesthetic enhancement. These systems typically consist of panels made from materials such as metal (aluminum, steel), fiber cement, composite materials, terracotta, or high-pressure laminates, which are mechanically fixed or adhered to a building's structural frame or substructure. Key functional attributes include durability, resistance to environmental factors, fire performance, and ease of installation, while design versatility allows for customization in color, texture, and form to meet architectural intents. Modern systems often integrate with building envelopes to contribute to energy efficiency, sustainability goals, and compliance with evolving construction standards and regulations.

The global External Wall Panel Systems market size was estimated at USD 10500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.75% during the forecast period.
