Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Extra Tacky High Temp Grease competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of extra-tacky high temp grease will reach approximately 116,000 tons, with an average unit price of US\$1,450 per ton and a gross profit margin of approximately 24%–28%. Extra-tacky high temp grease is a high-adhesion lubricant formulated by adding polymeric adhesives (such as polyisobutylene and tackifying resins) and anti-wear and extreme-pressure additives to a base oil system. It is primarily used for long-term lubrication and corrosion protection of metal friction pairs in heavy-duty machinery, off-road vehicles, port equipment, and agricultural and forestry machinery. This product exhibits excellent anti-swing properties, water washout resistance, and mechanical stability, maintaining an intact oil film at high temperatures (180°C) and under severe shear conditions. It is particularly suitable for long-term lubrication of open gears, chains, hinges, and bearings. In industrial applications, a medium-sized loader or tractor consumes approximately 30–50 kg of extra-tacky grease annually, while port cranes and open-pit mining machinery can consume up to 150–200 kg annually. Lucas Oil Products is a leading manufacturer of super-viscous greases in the North American market, with an annual production capacity of approximately 33,000 tons. Its "Red 'N' Tacky" series of products is known for its high adhesion and shear stability, and is widely used in heavy-duty truck chassis, agricultural machinery and industrial bearings.

The global Extra Tacky High Temp Grease market size was estimated at USD 168.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
