Report Overview

The Extracorporeal Membrane Oxygenation (ECMO) service market involves the provision of life-support systems that temporarily take over the function of the heart and lungs, oxygenating blood and removing carbon dioxide outside the body for critically ill patients. ECMO is primarily used in severe respiratory or cardiac failure cases, such as ARDS (acute respiratory distress syndrome), COVID-19 complications, or post-cardiac surgery recovery. The service includes specialized equipment, trained medical personnel, and hospital infrastructure to manage the complex procedure, which requires continuous monitoring and anticoagulation management. The market is driven by increasing demand for advanced critical care, rising prevalence of chronic diseases, and technological advancements in ECMO machines. However, high costs, limited accessibility in developing regions, and the need for highly skilled professionals pose challenges. Growth is further influenced by expanding ICU capacities, government healthcare investments, and rising awareness of ECMO's efficacy in life-threatening conditions.

The global Extracorporeal Membrane Oxygenation ECMO Service market size was estimated at USD 317.24 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.33% during the forecast period.
