Abstracts

The market for extremities reconstruction encompasses a specialized segment of the medical device industry focused on surgical solutions for repairing and replacing damaged or diseased bones, joints, and soft tissues in the upper and lower limbs—including shoulders, elbows, wrists, hands, hips, knees, ankles, and feet. This field involves the use of implants, prosthetics, fixation devices (such as plates, screws, and nails), biologics (like bone grafts and growth factors), and advanced technologies including patient-specific instrumentation and 3D-printed components. Driven by factors such as an aging population, rising incidence of osteoarthritis and trauma, growing participation in sports and physical activities, and advancements in material science and minimally invasive surgical techniques, the market addresses both elective procedures (e.g., joint replacements) and urgent orthopedic care (e.g., fracture management).
