## Abstracts

Extruded-grade PETG resin is a thermoplastic polyester material designed for extrusion molding processes (such as extrusion and injection molding). It is based on PET (polyethylene terephthalate) and is modified by copolymerization with cyclohexanedimethanol (CHDM). The addition of CHDM in its molecular chain inhibits crystallinity, giving the material high transparency (light transmittance > 90%), excellent melt strength and processing fluidity. It can be stably extruded or injection molded within a temperature range of 220-260°C to form complex structural products such as sheets, pipes, and films. The resin is both impact-resistant, chemically resistant (resistant to grease, alcohol, etc.) and food-grade safe (compliant with FDA standards). It is widely used in food packaging, medical equipment, 3D printing filaments and other fields, and has become an environmentally friendly solution to replace PVC and acrylic due to its recyclable properties.

The global Extruded Grade PETG market size was estimated at USD 708.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
