Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on F-Open Scope competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The F-Open Scope is a high-precision optical aiming device designed specifically for the F-Open group in F-Class shooting competitions. It features extremely high magnification (usually 35x to 60x), ultra-fine reticles, and excellent optical clarity to meet the needs of long-range precision shooting. Compared with the scopes used in the F-TR group, the F-Open scope has higher requirements for optical performance, magnification adjustment accuracy, and wind resistance. Because the F-Open group allows the use of heavier rifles and more stable support systems (such as forestock + buttstock), the players are more pursuing the ultimate optical assisted aiming performance.

The global F-Open Scope market size was estimated at USD 74.8 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global F-Open Scope market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.

The insights provided enable readers to understand the competitive dynamics within the industry and formulate effective strategies to enhance profitability and market positioning. Additionally, the report presents a clear framework for evaluating the current
