Report Overview

The F-Theta field lens is an optical component used in laser scanning systems and is widely used in applications such as laser marking, laser engraving and laser cutting. Its main purpose is to position the focus of the laser beam on a specific plane and make the focal length of the laser beam linearly related to the angle of the input signal within this plane. This design enables the laser focus to be accurately positioned in three-dimensional space according to the control instructions of the equipment, thereby achieving high-precision processing.
