Abstracts

Fabric Building Structures are large, versatile structures made with a steel or aluminum frame covered by a tensioned fabric material, typically made of PVC, polyester, or similar durable fabrics. These buildings are commonly used for industrial, agricultural, and commercial purposes due to their cost-effectiveness, quick construction times, and ability to withstand harsh weather conditions. The fabric covering allows for natural light to penetrate, reducing the need for artificial lighting during the day. Fabric buildings are often favored for their flexibility, as they can be easily expanded, relocated, or reconfigured to suit changing needs. They also provide a more environmentally friendly and energy-efficient option compared to traditional buildings with solid walls and roofs.

The global Fabric Building Structures market size was estimated at USD 2208.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
