Abstracts

Face RF Microneedling is an advanced cosmetic technique that combines the advantages of microneedling therapy and radiofrequency technology. It creates numerous tiny channels in the skin surface by introducing a microneedle array, which enables more effective delivery of radiofrequency energy to the deep layers of the skin. Meanwhile, the heat generated by radiofrequency can stimulate the proliferation and remodeling of collagen and elastic fibers in the skin, promoting skin tightening and regeneration. This technology can be used to improve various facial skin problems such as wrinkles, sagging, acne scars, and large pores. It can effectively enhance the smoothness, elasticity and firmness of the skin, restoring the skin to a youthful state. Compared with traditional cosmetic methods, it has the characteristics of less trauma, quick recovery and remarkable effects.

The global Face RF Microneedling market size was estimated at USD 368.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
