Abstracts

The facial skin analysis system is an intelligent detection device based on image processing, artificial intelligence, and optical imaging technologies. It uses high-resolution cameras or multispectral imaging to capture facial skin characteristics such as texture, color, pores, wrinkles, oil secretion, moisture content, and pigment distribution. Combined with AI algorithms, it performs quantitative analysis and diagnosis, generating a skin health report. This system is widely used in beauty salons, medical institutions, and the cosmetics industry to assess skin condition, identify skin concerns (such as acne, pigmentation, and sensitivity), track treatment results, and provide personalized skincare recommendations, achieving scientific and precise skin management. Facial skin analysis systems have evolved from traditional single-image devices to intelligent platforms integrating multispectral imaging, 3D modeling, and artificial intelligence (AI) deep learning. These systems are widely used in medical aesthetics institutions, dermatology clinics, and high-end skincare brands, enabling precise quantitative analysis of multiple dimensions, including facial skin texture, pigmentation, wrinkles, pores, and oil-water balance. Current developments include miniaturized hardware and non-invasive testing. AI algorithms automatically identify skin concerns and generate personalized reports. Some systems have been integrated into smart mirrors or mobile apps, driving widespread adoption in the consumer market. Future developments will focus on higher-precision physiological parameter detection (such as subcutaneous inflammation and collagen density), integrated analysis with dermatomic data, remote diagnosis and personalized skincare recommendations, and the integration of augmented reality (AR) virtual try-ons, further evolving towards intelligent, home-based, and life-cycle skin health management.

The global Facial Skin Analysis System market size was estimated at USD 315.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30%

during the forecast period.
