Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Factory Security System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Factory Security System production reached approximately 18.67 k units, with an average global market price of around US\$ 28000 per unit. A factory security system is a comprehensive solution that integrates physical protection, electronic monitoring, automated control, and data analysis technologies. It aims to protect factory personnel, assets, production processes, and data from unauthorized access, damage, theft, or accidents. Its core goal is to achieve risk early warning, incident response, and loss minimization through a multi-layered protection mechanism. The global upstream component suppliers of Factory Security Systems are highly specialized and regionally concentrated. Core suppliers include hardware manufacturers that provide high-definition cameras (such as Sony and ON Semiconductor), AI chips (Nvidia and Huawei Ascend), and sensors (Honeywell and Siemens), as well as software companies that focus on video management software (VMS, such as Milestone and Hikvision) and physical security information management platforms (PSIM, such as Genetec). At the same time, suppliers of edge computing equipment (such as Dell and Inspur) and communication modules (5G/LoRa, such as Qualcomm and Huawei) also play a key role. Downstream Customers cover the entire manufacturing sector. The chemical and energy industries have become the main purchasers of high-end intelligent systems (such as explosion-proof AI monitoring and gas leak detection) due to their stringent safety and compliance requirements. Large-scale manufacturers such as automobiles and electronics focus on machine safety protection (light grids, safety PLCs) and quality inspection integrated solutions, while the food and pharmaceutical industries focus on health and safety monitoring (temperature and humidity sensors, pest identification) and

data traceability functions. In addition, small and medium-sized factories in emerging markets (Southeast Asia and India) are still mainly based on standardized products such as basic access control and alarm systems due to policy promotion and cost sensitivity, forming a multi-level demand structure.

The global Factory Security System market size was estimated at USD 524.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Factory Security System market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
