## Abstracts

Failure Analysis and Repair Service refers to a specialized engineering and diagnostic service aimed at identifying the root causes of component, material, or system failures and providing targeted solutions to restore functionality or prevent recurrence. This service integrates advanced analytical techniques such as visual inspection, metallographic analysis, spectroscopy, scanning electron microscopy (SEM), mechanical testing, and non-destructive testing (NDT) to examine physical, chemical, and structural properties of failed parts. Failure modes such as fatigue, corrosion, wear, fracture, and thermal damage are thoroughly analyzed. Based on the findings, repair strategies including material substitution, design optimization, process modification, or on-site component restoration are proposed and executed. Widely applied in aerospace, automotive, electronics, energy, manufacturing, and heavy industries, these services help reduce downtime, improve safety, optimize lifecycle performance, and ensure product reliability. As industries increasingly emphasize predictive maintenance and product quality, failure analysis and repair services are becoming essential tools in operational risk control and quality assurance.
