Report Overview

False teeth are custom-made tools to replace an individual's missing teeth and restore the appearance and oral functions. They are available in two types known as complete and partial. The conventional implants are customized after the teeth have been removed and the gum tissue is completely healed. However, an immediate denture is positioned as soon as the teeth are removed to carry out basic teeth functions and are then subsequently replaced with conventional artificial teeth after a certain time. These are made from pink acrylic stimulating gum tissue, and teeth are made of plastic or porcelain. Moreover, the growing number of periodontal diseases and edentulism leads to increasing demand for these products globally.
