Abstracts

A fan negative ion generator is a device that combines the air circulation function of a traditional fan with the ability to release negatively charged ions into the surrounding environment, which are claimed to attach to airborne particles such as dust, pollen, and allergens, causing them to settle out of the air or be more easily captured by filters; these products are marketed for improving indoor air quality, reducing static electricity, and enhancing overall well-being, though scientific consensus on the efficacy and health benefits of negative ions remains mixed and subject to ongoing debate.

The global Fan Negative Ion Generator market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
