Abstracts

Far infrared therapy devices are medical or wellness products that utilize far infrared radiation, a specific segment of the infrared spectrum with wavelengths between 5.6 and 1,000 micrometers, to deliver therapeutic heat deep into body tissues. Unlike near-infrared devices that primarily affect the skin's surface, far infrared technology penetrates up to several centimeters beneath the skin, promoting improved blood circulation, pain relief, muscle relaxation, and detoxification through induced sweating. These devices come in various forms, including portable mats, wraps, panels, and saunas, and are commonly used for managing chronic pain, arthritis, muscle stiffness, and stress, as well as for general wellness enhancement. The underlying mechanism involves the emission of electromagnetic waves that are absorbed by the body, causing molecules to vibrate and generate heat from within, which can help reduce inflammation, ease joint discomfort, and support recovery from physical exertion.

The global Far Infrared Therapy Device market size was estimated at USD 1200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
