Abstracts

Fast acting human insulin refers to synthetic insulin analogs designed to mimic the physiological insulin response after meals, with a rapid onset of action?typically within 15 minutes of injection?and a shorter duration of effect compared to regular human insulin, making it critical for managing postprandial blood glucose levels in individuals with diabetes. These formulations, such as insulin lispro, aspart, and glulisine, are engineered through amino acid modifications to prevent self-aggregation, allowing faster absorption and providing greater flexibility in dosing timing relative to food intake. The global market is primarily driven by the rising prevalence of diabetes, increasing awareness of glycemic control, and advancements in drug delivery technologies. Key players include Novo Nordisk, Eli Lilly, and Sanofi, which dominate through extensive R&D, branding, and distribution networks. Growth is further fueled by expanding access in emerging economies, though pricing pressures, biosimilar competition, and regulatory hurdles pose challenges. The market is also seeing a shift toward integrated diabetes management solutions, combining insulin with digital health tools for improved patient outcomes.

The global Fast Acting Human Insulin market size was estimated at USD 19850.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.62% during the forecast period.
