Abstracts

Fast Fusing Plasticizer is a plasticizer specially used to increase the plasticization rate of polymers. It has the characteristics of rapid fusion and dispersion, and is particularly suitable for the processing of materials such as polyvinyl chloride (PVC). Fast fusing plasticizers can quickly enter the polymer matrix at a lower temperature, thereby shortening the processing time, reducing production energy consumption, and improving the flexibility and tensile properties of the material. This type of plasticizer not only improves production efficiency, but also reduces polymer degradation caused by long-term high-temperature processing.

The global Fast Fusing Plasticizer market size was estimated at USD 332.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the forecast period.
