Abstracts

Fat oxidants (also known as fat antioxidants) are a class of substances that can delay or prevent the oxidation of fats and oils in food. During food processing, storage and transportation, oils and fats easily react with oxygen in the air, causing food to deteriorate, darken in color, and produce bad odors. Fat oxidants inhibit or slow down this oxidation process by capturing and scavenging free radicals, or through other mechanisms, thereby extending the shelf life of food and maintaining food quality. With the improvement of people's health awareness and the increasing demand for functional foods, the market demand for fat oxidants, as important food additives, is showing a growing trend. Fat oxidants can effectively prevent fat oxidation in food, extend the shelf life of food, and improve the nutritional value and safety of food. Therefore, they have received widespread attention from the food industry. In short, the fat oxidizer market has broad development prospects and potential.

The global Fat Oxidizer market size was estimated at USD 314.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
