Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Fatty Acid Methyl Ester Sulfonate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Fatty acid methyl ester sulfonate is an anionic surfactant with excellent water solubility, foaming ability, cleaning power, and calcium soap dispersibility. Its molecular structure contains ester chains, which are easily hydrolyzed, making it superior in biodegradability and environmentally friendly. In addition, MES also has strong resistance to hard water and can maintain stable performance under various water quality conditions. The production process of sodium fatty acid methyl ester sulfonate mainly includes three steps: ester exchange reaction, sulfonation reaction, and neutralization reaction. Convert natural oils and fats into fatty acid methyl esters through ester exchange reactions; Then, the fatty acid methyl ester is sulfonated using a sulfonating agent to generate sulfonic acid esters; Convert sulfonic acid esters into fatty acid methyl ester sodium sulfonate through neutralization reaction. During the production process, it is necessary to strictly control the reaction conditions to ensure the quality and performance of the product. Sodium fatty acid methyl ester sulfonate has a wide range of applications in multiple fields. In the detergent industry, MES is used as a surfactant for products such as laundry detergent and dishwashing liquid, which can improve the cleaning power and washing effect. In the fields of leather processing and textile printing and dyeing, MES, as an emulsifier and dispersant, can improve the processing performance and quality of leather and textiles. In addition, MES can also be used in fields such as ore flotation, wool washing, and the manufacturing of cosmetics and lubricants. With the increasing awareness of environmental protection and the requirements of sustainable development, sodium fatty acid methyl ester sulfonate, as a green and environmentally friendly surfactant, has a very broad market prospect. The

demand for MES continues to grow in both domestic and international markets, especially in the detergent industry where its application continues to expand. With the continuous advancement of production technology and the reduction of costs, the application areas of MES will further expand, and market demand will continue to grow.

The global Fatty Acid Methyl Ester Sulfonate market size was estimated at USD 76.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
