Report Overview

The Faulted Circuit Indicator (FCI) is a critical electrical protection device used in power distribution networks to detect and locate faults, such as short circuits or ground faults, in overhead or underground power lines. FCIs monitor electrical parameters like current and voltage, triggering visual or remote alerts when abnormalities occur, enabling utilities to quickly isolate and repair faults, minimizing downtime and improving grid reliability. These devices are essential for modern smart grids, aiding in fault detection, system automation, and reducing outage durations. They come in various types, including electromechanical, electronic, and advanced models with communication capabilities for real-time monitoring via SCADA systems.
