Abstracts

The FC (Fiber Channel) fiber optic interface is a high-speed data transfer standard primarily used in storage area networks (SANs), enterprise data centers, and high-performance computing environments, featuring a threaded connector design that ensures secure, low-loss connections suitable for applications requiring reliability and minimal signal degradation. It supports various fiber types, including single-mode and multi-mode, and operates across a range of data rates, from 1 Gbps to 128 Gbps in newer iterations, with its physical robustness and alignment precision making it well-suited for environments subject to vibration or movement. While facing competition from smaller form factors like LC and SFP-based interfaces, the FC connector remains relevant in legacy systems and specific niches where its mechanical stability and performance characteristics are prioritized.

The global Fc Fiber Optic Interface market size was estimated at USD 25.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
