Abstracts

An FCU (Fan Coil Unit) Terminal Device refers to a type of HVAC (Heating, Ventilation, and Air Conditioning) equipment designed to regulate the temperature in a room or space. It consists of a fan and a coil (usually chilled or heated water pipes) within a unit. FCUs are used to deliver air at different temperatures, providing both heating and cooling to the room or zone they serve. The FCU terminal device operates by drawing in room air, passing it over the coils (which are either heated or cooled), and then circulating the conditioned air back into the space. These units can be controlled via thermostats, allowing precise temperature regulation.

The global FCU Terminal Devices market size was estimated at USD 3024.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
