Abstracts

A feces concentrator is a device specially designed to process feces and achieve solid-liquid separation. The feces concentrator effectively separates the solid particles from the liquid part of the feces through a specific mechanical action. This process not only helps to reduce the volume of feces, making it easier to store and transport, but the separated solid part can also be used as a raw material for organic fertilizer or fish feed to achieve resource recycling. Feces concentrators are widely used in agriculture, animal husbandry and environmental protection. In agriculture and animal husbandry, it can help farmers deal with large amounts of poultry and livestock manure and reduce environmental pollution. At the same time, the separated solid manure can also be used as organic fertilizer to improve soil fertility. In the field of environmental protection, feces concentrators have become one of the important equipment for treating urban feces and sewage, helping to reduce sewage discharge and environmental pollution.

The global Feces Concentrator market size was estimated at USD 927.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
