Report Overview

Feed antibiotics are antimicrobial agents added to animal feed to promote growth, improve feed efficiency, and prevent or treat bacterial infections in livestock. These additives have been widely used in the agriculture industry to enhance productivity, particularly in poultry, swine, and cattle farming. However, their use has become controversial due to concerns about antibiotic resistance, leading to stricter regulations and growing demand for alternatives such as probiotics, prebiotics, and plant-based growth promoters. The market is segmented by type (tetracyclines, penicillins, macrolides, sulfonamides, etc.), livestock (poultry, swine, ruminants, aquaculture), and region, with Asia-Pacific being a major consumer due to intensive farming practices. Increasing meat consumption and industrialization of livestock production drive demand, while regulatory bans in regions like the EU and shifting consumer preferences toward antibiotic-free meat challenge market growth. Key players include Zoetis, Elanco, Merck Animal Health, and Bayer, who are investing in research for safer alternatives to maintain market relevance.

The global Feed Antibiotics market size was estimated at USD 2817.35 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.45% during the forecast period.
